

CUDA Lab Overview

- 1) We introduce the CUDA programming model using lecture slides, followed by instructions on how to access the computing cluster and run the first “Hello World” GPU program.
- 2) We then proceed to vector addition and naïve matrix multiplication.
- 3) In the final step, you will complete a tiled matrix multiplication exercise.

Note:

- 1) All code templates will be provided.
- 2) The login credentials for the cluster are provided to each group of three.
